

Mining and Mineral-Processing Equipment
Conveyors, spreaders, crushers

Production history

"Novokramatorsky Mashinostroitelny Zavod" – NKMZ – is one of the largest scientific-and-production complexes on the European continent, traditionally specializing in the designing, manufacturing and integrated supplying of high-quality equipment for mining and metallurgical enterprises and the fuel and energy industry.

For more than 70 years “NKMZ” is a recognized leader of heavy engineering industry of Ukraine and a reliable partner among well-known European companies, supplying its products in 78 countries of the world.

In 1935, it was at NKMZ that the first mine winders in the USSR were manufactured, and in the early 60s the first bucket-wheel excavators and dump spreaders were manufactured. Walking draglines with the NKMZ brand have been widely recognized in 27 countries of the world.

Since the mid-40s of the last century, thanks to the equipment manufactured at the plant, dozens of new mining enterprises appeared and many existing ones have been upgraded. Therefore, NKMZ is justly called the “factory of plants,” since the biography of the plant is a biography of the establishment and development of not only domestic engineering, but, often, heavy industry as a whole.

14 continuous machine complexes, 2012 single-bucket excavators, more than 2100 mine winders, about 3000 ore- and coal-crushing mills, about 100 crushing units, crushers, screens and many other unique equipment for mining industry have been designed and manufactured by the specialists of NKMZ.
